

ComFix Software provides TermGardium™ products for monitored, managed, and modern access to legacy and host applications.

Two pillars of the product family

Modernized Security for Legacy Applications

Monitor user activity, create audit evidence, add AI-driven fraud detection software, search session context, and enforce rules.

Operational / Access

Desktop and web access, plus RPA, HLLAPI, and API-like access patterns.

Three products for governed host access

termguardium-gateway

Security and compliance layer for host sessions.

- o Captures host-session activity.
- o Creates searchable audit trails.
- o Supports policy decisions and enforcement.

termguardium-TE

Desktop operational access for users and automation.

- o Reliable PC-to-host access.
- o HLLAPI and RPA continuity.
- o Broad language support.

termguardium-Emulator

Web operational access through the browser.

- o Zero-footprint browser access.
- o Removes VPN dependency for many use cases.
- o Centralized updates and deployment.

Where TermGardium™ fits

TermGardium™ is for organizations that still rely on legacy and host applications, but need better security, easier access, and a path toward modernization. Gateway covers monitoring and control. TE covers desktop access and HLLAPI/RPA continuity. Emulator covers browser access, centralized delivery, and API-like access patterns.
